	1990	1995	2000	2005	2010	2015	2020	2025	2030	'90-'00	'00-'10	'10-'20	'20-'30
	Annual % Change												
Main Energy System Indicators													
Population (Million)	38.826	39.343	40.050	43.047	44.433	45.264	45.559	45.556	45.379	0.3	1.0	0.3	0.0
GDP (in 000 M€05)	573.7	631.5	772.2	905.5	1065.0	1242.2	1410.8	1556.3	1674.6	3.0	3.3	2.9	1.7
Gross Inl. Cons./GDP (toe/M€05)	155.8	161.8	158.9	158.5	143.0	127.4	113.8	101.9	92.5	0.2	-1.0	-2.3	-2.1
Carbon intensity (t of CO ₂ /toe of GIC)	2.27	2.21	2.31	2.37	2.27	2.16	1.99	1.96	1.76	0.1	-0.2	-1.3	-1.2
Import Dependency %	64.2	71.6	76.5	81.2	78.0	76.9	75.4	76.2	72.3				
Total Energy-related Costs ^(B) (in 000 M€05)			71.4	82.6	102.1	118.2	135.5	149.8	160.7		3.6	2.9	1.7
as % of GDP			9.2	9.1	9.6	9.5	9.6	9.6	9.6				
Energy intensity indicators													
Industry (Energy on Value added, index 2000=100)	96.6	97.9	100.0	114.8	108.1	99.4	91.2	84.2	79.7	0.3	0.8	-1.7	-1.3
Residential (Energy on Private Income, index 2000=100)	103.7	102.8	100.0	107.5	100.2	89.6	78.1	69.5	62.8	-0.4	0.0	-2.5	-2.2
Tertiary (Energy on Value added, index 2000=100)	68.6	89.1	100.0	106.9	93.1	81.4	70.8	64.1	58.3	3.8	-0.7	-2.7	-1.9
Passenger transport (toe/Mpkm)	40.0	39.0	42.4	42.1	40.7	38.7	36.4	35.1	34.5	0.6	-0.4	-1.1	-0.5
Freight transport (toe/Mtkm)	87.8	76.6	69.3	61.1	60.7	58.6	54.9	52.1	49.2	-2.3	-1.3	-1.0	-1.1
Carbon Intensity indicators													
Electricity and Steam production (t of CO ₂ /MWh)	0.42	0.41	0.42	0.39	0.34	0.30	0.26	0.24	0.18	0.0	-2.0	-2.9	-3.7
Final energy demand (t of CO ₂ /toe)	2.26	2.27	2.21	2.18	2.13	2.04	1.88	1.76	1.67	-0.2	-0.4	-1.2	-1.2
Industry	2.10	2.12	1.92	1.87	1.87	1.78	1.44	1.18	0.99	-0.9	-0.3	-2.6	-3.6
Residential	1.39	1.36	1.39	1.34	1.26	1.15	1.01	0.83	0.67	0.0	-1.0	-2.1	-4.0
Tertiary	1.53	1.50	1.40	1.40	1.33	1.26	1.21	1.15	1.08	-0.9	-0.5	-1.0	-1.1
Transport	2.94	2.95	2.96	2.96	2.86	2.77	2.69	2.68	2.66	0.1	-0.3	-0.6	-0.1
Indicators for renewables													
Share of RES in Gross Final Energy Consumption ^(C) (%)			8.2	8.2	11.6	17.2	24.5	29.8	33.4				
Biofuels share in transport gasoline and diesel (%)			0.2	0.8	4.8	8.7	11.6	11.9	12.3				
Gross Electricity generation by source (in GWh)													
			222776	290555	307681	325719	349433	385669	406405		3.3	1.3	1.5
Nuclear energy			62195	57529	61059	58096	58096	34176	48490		-0.2	-0.5	-1.8
Solids			78694	77443	81164	82545	75620	83821	61905		0.3	-0.7	-2.0
Oil (including refinery gas)			19567	23770	8397	4020	5102	5325	5350		-8.1	-4.9	0.5
Gas (including derived gases)			24741	85513	83972	72726	60841	67808	59491		13.0	-3.2	-0.2
Biomass-waste			3374	5457	8293	18091	36394	63989	72510		9.4	15.9	7.1
Hydro (pumping excluded)			29465	19549	28872	28392	28618	29119	29674		-0.2	-0.1	0.4
Wind			4723	21215	35251	60299	79860	93965	108373		22.3	8.5	3.1
Solar			18	78	674	1549	4562	7076	20188		43.7	21.1	16.0
Geothermal and other renewables			0	0	0	0	340	389	424				2.2
Net Generation Capacity in MW_e			60718	80297	92107	101249	110658	119255	141884		4.3	1.9	2.5
<u>Nuclear energy</u>			7579	7579	7434	6986	6986	4107	5600		-0.2	-0.6	-2.2
<u>Renewable energy</u>			14974	22714	30615	40537	49904	58116	80030		7.4	5.0	4.8
Hydro (pumping excluded)			12725	12725	13817	13820	13822	13822	13822		0.8	0.0	0.0
Wind			2235	9937	16363	25718	32982	39527	52858		22.0	7.3	4.8
Solar			14	52	435	998	2923	4565	13130		41.5	21.0	16.2
Other renewables (tidal etc.)			0	0	0	0	176	202	220				2.2
<u>Thermal power</u>			38166	50004	54058	53726	53768	57032	56254		3.5	-0.1	0.5
of which cogeneration units			5017	7578	7541	9322	8757	11328	11345		4.2	1.5	2.6
Solids fired			11352	11485	11277	10503	10163	10589	9893		-0.1	-1.0	-0.3
Gas fired			19801	32257	35544	34167	32639	30874	30374		6.0	-0.8	-0.7
Oil fired			6518	5375	5589	5203	3912	3248	2504		-1.5	-3.5	-4.4
Biomass-waste fired			495	887	1648	3854	7055	12322	13483		12.8	15.7	6.7
Fuel Cells			0	0	0	0	0	0	0				
Geothermal heat			0	0	0	0	0	0	0				
Avg. Load factor of net power capacity (%)			40.0	39.6	36.8	35.5	34.9	35.4	31.5				
Efficiency of gross thermal power generation (%)			41.1	46.7	46.7	47.7	49.3	54.0	57.5				
% of gross electricity from CHP			7.4	13.5	12.5	15.0	15.0	18.3	17.7				
Carbon free gross electricity generation (%)			44.8	35.7	43.6	51.1	59.5	59.3	68.8				
- nuclear			27.9	19.8	19.8	17.8	16.6	8.9	11.9				
- renewable energy forms			16.9	15.9	23.8	33.3	42.9	50.4	56.9

Source: PRIMES

(A) including the part of electricity and heat generated by renewables

(B) excluding payments for auctioned emission allowances (if applicable)

(C) Recently, Eurostat introduced a new indicator termed "share of renewables in Gross Final Energy Consumption", which is measured as a ratio of renewable energy used in all sectors (including the part of electricity and heat generated by renewables) over final energy demand increased by distribution losses and self consumption of electricity and steam.

(D) Total Compliance Costs do not include eventual costs associated with JI/CDM nor payments or revenues from possible exchanges of Guarantees of Origin

Disclaimer: Energy and transport statistics reported in this publication and used for the modelling are taken mainly from EUROSTAT and from the publication "EU Energy and Transport in Figures" of the Directorate General for Energy and Transport. Energy and transport statistical concepts have developed differently in the past according to their individual purposes. Energy demand in transport reflects usually sales of fuels at the point of refuelling, which can differ from the region of consumption. This is particularly relevant for airplanes and trucks. Transport statistics deal with the transport activity within a country but may not always fully include transit shipments. These differences should be borne in mind when comparing energy and transport figures. This applies in particular to transport activity ratios, such as energy efficiency in freight transport, which is measured in tonnes of oil equivalent per million tonne-km.

Abbreviations

GIC: Gross Inland Consumption

CHP: combined heat and power

Units

toe: tonne of oil equivalent, or 10^7 kilocalories, or 41.86 GJ (Gigajoule)

ktoe: 1000 toe

MW: Megawatt or 10^6 watt

MWh: megawatt-hour or 10^6 watt-hours

GWh: gigawatt-hour or 10^9 watt-hours

t: metric tonnes, or 1000 kilogrammes

Mt: Million metric tonnes

km: kilometre

pkm: passenger-kilometre (one passenger transported a distance of one kilometre)

tkm: tonne-kilometre (one tonne transported a distance of one kilometre)

Gpkm: Giga passenger-kilometre, or 10^9 passenger-kilometre

Gtkm: Giga tonne-kilometre, or 10^9 tonne-kilometre

Source: PRIMES

(A) including the part of electricity and heat generated by renewables

(B) excluding payments for auctioned emission allowances (if applicable)

(C) Recently, Eurostat introduced a new indicator termed "share of renewables in Gross Final Energy Consumption", which is measured as a ratio of renewable energy used in all sectors (including the part of electricity and heat generated by renewables) over final energy demand increased by distribution losses and self consumption of electricity and steam.

Disclaimer: Energy and transport statistics reported in this publication and used for the modelling are taken mainly from EUROSTAT and from the publication "EU Energy and Transport in Figures" of the Directorate General for Energy and Transport. Energy and transport statistical concepts have developed differently in the past according to their individual purposes. Energy demand in transport reflects usually sales of fuels at the point of refuelling, which can differ from the region of consumption. This is particularly relevant for airplanes and trucks. Transport statistics deal with the transport activity within a country but may not always fully include transit shipments. These differences should be borne in mind when comparing energy and transport figures. This applies in particular to transport activity ratios, such as energy efficiency in freight transport, which is measured in tonnes of oil equivalent per million tonne-km.

Abbreviations

GIC: Gross Inland Consumption

CHP: combined heat and power

Units

toe: tonne of oil equivalent, or 10⁷ kilocalories, or 41.86 GJ (Gigajoule)

ktoe: 1000 toe

MW: Megawatt or 10⁶ watt

MWh: megawatt-hour or 10⁶ watt-hours

GWh: gigawatt-hour or 10⁹ watt-hours

t: metric tonnes, or 1000 kilogrammes

Mt: Million metric tonnes

km: kilometre

pkm: passenger-kilometre (one passenger transported a distance of one kilometre)

tkm: tonne-kilometre (one tonne transported a distance of one kilometre)

Gpkm: Giga passenger-kilometre, or 10⁹ passenger-kilometre

Gtkm: Giga tonne-kilometre, or 10⁹ tonne-kilometre

Source: PRIMES

(A) including the part of electricity and heat generated by renewables

(B) excluding payments for auctioned emission allowances (if applicable)

(C) Recently, Eurostat introduced a new indicator termed "share of renewables in Gross Final Energy Consumption", which is measured as a ratio of renewable energy used in all sectors (including the part of electricity and heat generated by renewables) over final energy demand increased by distribution losses and self consumption of electricity and steam.

(D) Total Compliance Costs do not include eventual costs associated with JI/CDM nor payments or revenues from possible exchanges of Guarantees of Origin

Disclaimer: Energy and transport statistics reported in this publication and used for the modelling are taken mainly from EUROSTAT and from the publication "EU Energy and Transport in Figures" of the Directorate General for Energy and Transport. Energy and transport statistical concepts have developed differently in the past according to their individual purposes. Energy demand in transport reflects usually sales of fuels at the point of refuelling, which can differ from the region of consumption. This is particularly relevant for airplanes and trucks. Transport statistics deal with the transport activity within a country but may not always fully include transit shipments. These differences should be borne in mind when comparing energy and transport figures. This applies in particular to transport activity ratios, such as energy efficiency in freight transport, which is measured in tonnes of oil equivalent per million tonne-km.

Abbreviations

GIC: Gross Inland Consumption

CHP: combined heat and power

Units

toe: tonne of oil equivalent, or 10^7 kilocalories, or 41.86 GJ (Gigajoule)

ktoe: 1000 toe

MW: Megawatt or 10^6 watt

MWh: megawatt-hour or 10^6 watt-hours

GWh: gigawatt-hour or 10^9 watt-hours

t: metric tonnes, or 1000 kilogrammes

Mt: Million metric tonnes

km: kilometre

pkm: passenger-kilometre (one passenger transported a distance of one kilometre)

tkm: tonne-kilometre (one tonne transported a distance of one kilometre)

Gpkm: Giga passenger-kilometre, or 10^9 passenger-kilometre

Gtkm: Giga tonne-kilometre, or 10^9 tonne-kilometre
